

Personal Portfolio Website Documentation

Project Title: Personal Portfolio Website

Technology Used: HTML5

Developer: AVNISH KUMAR

Internship Organization: The Developer Arena

Submission Date: 12FEBRUARY2026

1. Project Overview

1.1 Introduction :-

The Personal Portfolio Website is a static web project developed using **HTML5**. The purpose of this project is to create a professional online presence that showcases my skills, projects, education, and contact information.

1.2 Project Goals :-

- To apply HTML concepts learned during training
- To design a structured and semantic website
- To present personal and academic information professionally
- To demonstrate understanding of webpage structure and layout

1.3 Objectives

- Build a multi-section portfolio webpage
 - Use semantic HTML elements properly
 - Organize content in a clear and readable format
 - Ensure proper navigation within the page
-

2. HTML Concepts Learned

During this project, the following HTML concepts were learned and implemented:

2.1 Basic HTML Structure

- `<!DOCTYPE html>`
- `<html>`
- `<head>`
- `<title>`

- `<body>`

These elements form the basic structure of every HTML document.

2.2 Headings and Paragraphs

- `<h1>` to `<h6>` for headings
- `<p>` for paragraphs

Used to organize content hierarchically.

2.3 Lists

- `<ul>` (Unordered List)
- `<ol>` (Ordered List)
- `<li>` (List Items)

Used to display skills, achievements, and project lists.

2.4 Links

- `<a href="">`

Used for navigation and linking to external resources.

2.5 Images

- `<img src="" alt="">`

Used to display profile picture and project screenshots.

2.6 Tables

- `<table>`, `<tr>`, `<td>`, `<th>`

Used to structure educational qualifications or other tabular data.

2.7 Forms

- `<form>`
- `<input>`
- `<label>`
- `<textarea>`
- `<button>`

Used to create a contact form for user interaction.

2.8 Semantic Elements

- `<header>`

- `<nav>`
- `<section>`
- `<article>`
- `<footer>`

These elements improve readability and structure of the webpage.

3. Portfolio Structure

The website is structured into the following main sections:

3.1 Header Section

Contains:

- Name
- Professional title
- Navigation menu

3.2 About Me Section

Includes:

- Introduction
- Career objective
- Brief background

3.3 Skills Section

Displays:

- Technical skills
- Soft skills
- Tools known

3.4 Projects Section

Contains:

- Project title
- Description
- Technologies used

3.5 Contact Section

Includes:

- Contact form
 - Email
 - Phone number
-

4. Setup Instructions

Since this is a static HTML project, setup is simple:

Step 1:

Install any code editor:

- VS Code (Recommended)
- Notepad++
- Sublime Text

Step 2:

Create a project folder:

Portfolio-Website

Step 3:

Inside the folder, create:

index.html
images/

Step 4:

Open `index.html` in a browser:

- Double click the file
OR
- Right click → Open with browser

No server or database configuration is required.

5. Code Structure

5.1 File Hierarchy

```
Portfolio-Website/  
├── index.html  
├── ---about.html  
├── ----skill.html  
├── -----contact.html  
└── images/  
    ├── profile.jpg
```

5.2 Code Organization

- HTML is structured using indentation for readability.
- Sections are separated using semantic tags.
- Comments are added to explain each part of the code.
- Proper naming conventions are used.

Example:

```
<!-- About Section -->  
<section id="about">  
  <h2>About Me</h2>  
  <p>This section contains information about me.</p>  
</section>
```

6. Technical Details

6.1 Architecture

The project follows a **single-page static website architecture**:

- All content is placed inside one HTML file.
- Navigation links use anchor tags (`#section-id`) to scroll to sections.

Example:

```
<a href="#about">About</a>
```

6.2 Algorithms Used

Since this is a static HTML project, no complex algorithms are implemented. However:

- Anchor navigation logic is used for internal page linking.
- Form structure is designed for structured data collection.

6.3 Data Structures

No advanced data structures are used because:

- The website is static.
- Content is directly embedded in HTML.

6.4 Design Approach

- Structured layout using semantic tags.
- Clear content hierarchy using headings.
- Organized sections for readability.

7. Testing Evidence

7.1 Functional Testing

Test Case	Expected Result	Status
Click navigation link	Scrolls to correct section	Passed
Load webpage	All content displays correctly	Passed
Images load	Images appear correctly	Passed
Contact form input	Fields accept user input	Passed

7.2 Browser Testing

Tested on:

- Google Chrome 
- Microsoft Edge 
- Mozilla Firefox 

7.3 Validation

- HTML code checked for proper tag nesting.
- Verified that all images load correctly.
- Checked internal navigation links.

8. Visual Documentation

Include screenshots of:

- Home page

About Me

I'm Avnish kumar. I have done 12th with 83% and 10th with 85.3% both from UP board. currently I am persuing B.Tech with core branch Computer Science and Engineering from IMSEC Ghaziabad. My additional education is that i have done CCA (Certificate in Computer Application) from AICT COMPUTER EDUCATION

Education Qualification :

Qualification	Board	Year	Percentage
B.Tech	AKTU	2027	8.5 CGPA
12th	UP	2023	83%
10th	UP	2021	85.33%

Projects

Smart-Dashboard

This project mainly focus on students. It provides various tools/software in single application like TO-DO LIST, VIRTUAL WHITEBOARD , PDF CONVERTER STUDY TRACKER , AI CHATBOAT and many more...

Code Error Fixer

This project mainly focus on coder which help to remove error and bugg from the code and generate a new error free file which will be successful executed without any waring or any error

9.Quality Standards Checklist

- ✓ Clear project objective
- ✓ Proper HTML structure
- ✓ Semantic elements used
- ✓ Organized file structure
- ✓ Functional navigation
- ✓ Contact form included
- ✓ Tested on multiple browsers
- ✓ Screenshots included

10.Conclusion

The Personal Portfolio Website project successfully demonstrates understanding of core HTML concepts including structure, semantic elements, lists, forms, tables, and navigation. The project fulfills all requirements and presents a clean and organized professional portfolio using only HTML.

This project helped strengthen foundational web development skills and improved understanding of webpage structuring and documentation practices.
